ADVANCE FLEET MANAGEMENT PLATFORM

Trakzee

Whether you have 10 or 10,000 assets, Trakzee helps companies organize, manage and coordinate work vehicles from a central information system to keep the overall fleet operations running smoothly.

Fuel management

Fuel cost is the biggest concern for fleet operators. Customer will get fuel usage reports like fuel refill and fuel pilferage for effective fuel management. Alerts are available for fuel theft and fuel leakage.

Tire Pressure Monitoring

Another concern after fuel is of tires which is majorly neglected. TPMS helps you to maintain every detail of the life span of your fleet tire while giving an alert when the tire pressure is too low.

Temperature Monitoring

Our temperature monitoring system delivers convenient, real-time temperature data right to your desktop or mobile device. Know exactly when trailer temperatures drop below or rise above your predetermined points to take necessary step.

Maintenance Reminders

Timely maintenance of vehicles are key to their long life. Get reminders to improve your fleet's health like service due date, engine oil change as per mileage covered. Add your previous service expenses to maintain the records on the platform.

Video Telematics

To analyse driver activity and in case of accident, video recording can be of great evidence. Owners are able to keep an eye on the driver's behavior and receive timely video evidence of critical incidents.

ADAS

Safety is the biggest concern above all. Advanced driver-assistance systems are systems developed to automate and enhance vehicle systems for safety and better driving and prevents collision.
